

# PROJECT PROOF-SETTER

**AIM:** To automate the conversion of information ( alignment and payload) from raw PDF to meaningful xsl & xml;

## PROCESS:

raw PDF

-----> pdf2htmlex (a.html)-----> MAPPING

raw PDF

----->Nougat ----> k-tagger (b.html)--> Mapping

in mapping, the css from a.html is mapping with b.html keeping tag as a foreign key to map and to geneate the xsl and xml from the mapped data

### My Part:

- a. Generating html using pdf2htmlex package
- b. Mapping a.html with b.html to generate the xsl.
